Safes

In Australia the equivalent of 61 homes are broken into every hour of the day and also every hour of the day, 9 people are victims of a robbery.

What do you consider valuable?

Jewellery, watches, personal or confidential papers, passports, money, computer records or maybe an item that has been passed down through the family and would be irreplaceable if stolen - if you see a value in it, so will a thief.

A thief is lazy. They want to use as little effort as possible to steal as much as they can. They do not want to spend the time attempting to break into a safe.

Safes will not only resist a forceful attack but you can't just pick them up and walk off with them. All Locktech safes have an internal bolting system for added security. You also needn't worry about the thief using a stethoscope to listen to the locking mechanism - that only works in the movies.

Many people leave valuables in or on dressing tables, in easily accessible cupboards or just lying around because they're in their own home and they feel secure. But in the next hour another 61 people are going to regret not having a safe.

Make sure you're not one of them and have a Locktech Safe fitted today.

Rhino (EM016)
