

Electronic Card Lock (eLock)

Lockwood eLock is a sophisticated, easy to install electronic card lock, offering improved security and convenience over traditional mechanical locks.

Powered by battery, no wiring is required. Simply install eLock in place of your mechanical locks.

Low cost magnetic stripe cards replace traditional keys. You select which doors individual users need to access and enter those in the eLock memory bank.

You need not worry that lost cards will compromise security. Simply cancel the lost card from the eLock memory bank and issue a new card.

No wires!
No external
control equipment!

Major Features

- Install single or multiple eLocks
- No control equipment required
- System cards used to add/delete users
- Battery life up to 3 years
- Up to 1000 users per lock
- eLock records data of the last 100 card users for security audits

The easy to use eLock Access System comprises:

- A pack of Master, Stand Open and Blocking cards.
- User cards with corresponding Cancel cards supplied in packs of 10. (Order as many packs as required.)
- eLocks (No restriction on quantity.)

An optional software package is available to download eLocks audit trail.

Ease of use.

- To add a new user to the system simply insert the master card into the lock. This activates the programming mode. Next insert a new user card.
- To cancel a lost user card, simply insert the master card, followed by the corresponding cancel card.
- Up to 1000 user cards can be programmed for one lock.

Card Types

Master Card

A dual purpose Master card is pivotal to the function of the eLock Access system. The Master card activates the locks programming mode, enabling the addition or cancellation of specific User cards. It also ensures that the eLock is dedicated exclusively to that specific Master card. No other card can unlock the system which ensures complete security integrity.

Stand Open Card

The eLock Access system Stand Open card unlocks the door, which then remains unlocked until the Stand Open card is inserted. Thus general access is facilitated for designated and extended periods of time. While 'staff only' areas remain inviolate and secure behind card access locks, this useful Stand Open feature is ideal for areas requiring access by the general public during working hours.

Blocking Card

Occasionally temporary blocking of access to all card holders may be necessary (e.g. public holidays or office shutdowns). A feature of the Access system is a special Blocking card, which once inserted in the lock will prevent access by any other cards, with the exception of the Master card. To reverse this function, the Blocking card is inserted a second time, deactivating the blocking feature and allowing access to all User cards once more.

User Cards & Cancel Cards

The Access system incorporates a unique identity code on each pre-programmed User cards. No two cards are the same and the lock has the capacity to record individual card usage in its audit trail memory. To facilitate cancellation of individual or lost User cards without impacting on other users, every User card is supplied with a corresponding Cancel card.
