

## Nexion Keyless Entry System

(Safety & security at the touch of a button)

The Nexion keyless entry lockset represents the next generation in home security. This stylish, multi-functional lockset combines the security of an automatic deadlatch with numerous safety features and the added convenience of keyless operation. This battery operated lockset provides both audible and visible confirmation of electronic activation and also features a secure Access Cover to prevent unauthorised access to the battery compartment.

### LockAlert

The Nexion also has the unique Lockwood LockAlert status indicator that shows at a glance the lockset mode.

The lockset can operate in three modes: Secure Mode, Safety Mode and Passage Mode.

### Secure Mode

Handles securely locked from both inside and outside. This mode enables total security when leaving the property. The lockset cannot be opened from the inside without a key, or Q-Key. Incorporated is a SafetyRelease, which automatically changes the lockset to Safety Mode upon entry. This minimises the risk of being locked in.

## Safety Mode

Handles securely locked from the outside and free from the inside. This mode prevents unauthorised entry while making it easy to exit the property. A lockout release is incorporated which automatically changes the lockset to passage mode when the door is opened from the inside.

## Passage Mode

Handles free from both the inside and outside. The passage mode gives convenient access from inside and outside without the need for a key.

## Q-Key

Simple and convenient to use, the Q-Key remote control has a range of up to 3 metres. It incorporates the latest in Encrypted Rolling Code technology to provide the highest security possible.

The Nexion meets or exceeds the highest security and durability requirements in Australian Standard AS4145.2:1993 when fitted to an exterior quality door.

## Features & Specifications

- Lockset mode shown by LockAlert with indicator red when in secure mode, yellow when in safety mode and green when in passage mode.
